

We've built a **Better Bentonite.**TM

AquaBlok® 2080FW is a patented composite aggregate sealant resembling small stones that is comprised of a limestone aggregate core wrapped with powdered sodium bentonite clay.

Due to its reliably low permeability, structural stability, and ability to self-compact, AquaBlok can be used in a wide range of circumstances— specifically as a means to “blok” the movement of water (or when custom formulated, water-born contamination).

Advantages & Attributes

- **Effective for leak prevention and repair**
- **Apply dry or through standing water**
- **Highly durable and structurally stable**
- **Simplifies handling and reduces labor**
- **Available in two convenient packages**
(50-lb bags and bulk totes)

Nature's Duct Tape.TM

Simple. Unique. Versatile. Effective.

Applications

- Basin Construction & Rehab
- Synthetic Liner Repair/Reinforcement
- Dam/Berm/Levee Construction & Rehab
- Animal Damage/Burrow Plugging
- Trench Dams/Anti-Seep Collars
- Structure Bedding/Installation
- Manhole Sealing & Rehab (I&I)
- Utility Separation/Isolation
- Gas Migration Barrier
- Sink Hole Repair
- Secondary Containment
- Canal/Ditch Lining
- Temporary Dams/Stream Diversion
- Flood Mitigation
- Well Decommissioning/Sealing
