RAIN GARDENS • SWALES • FILTRATION BASINS • INFILTRATION BASINS

Engineer's Note

FocalPoint – Keeping ahead of the times

Many people feel that technology is evolving so fast that they are happy just to keep up with the times. At ASP/Quick Supply we work hard to stay ahead of the times. One example is the nation's most innovative biofiltration system, FocalPoint. We are currently helping engineering consultants, cities and contractors understand the FocalPoint design calculator and we are coordinating those efforts in conjunction with state stormwater management manuals and local regulations. We share our findings and communicate between all parties as we work towards design approval. An agreed-upon FocalPoint design (system dimensions) is just the beginning. We stay involved to educate the contractor on system components and proper installation. We also educate the owner on our one-year performance guarantee and the maintenance associated with the system. All of this education is based upon the knowledge we have gained from attendance at national seminars and conferences to learn of the best available solutions in low impact development. Our commitment to you, our customers and associates, is to keep ahead of the times as your most trusted solutions provider.

Please email me or call me if you have questions about FocalPoint or any of our LID solutions. Or let me know if you prefer a meeting at your office or project site.

Let's make it clean and keep it green!
