

Branch Spotlight

Our new Inside Sales and Display area.

A Google map look at our location-4.5 acres.

Our 40 person training room will be ideal for in-house seminars.

Our Kansas City Branch has moved to a much larger location!

New Address: 5301 East 59th Street, Kansas City, MO 64130

Location Description:

For the last several years, we have been patiently looking for a new location for our ASP-KC office. 8,000 square feet of warehouse space and little to no outside storage was just too small as our business has grown. Our new location offers us a great deal of opportunity:

28,000 sq. ft. of building, 24,000 sq. ft. of warehouse and 4,000 of office space to:

- Expand our office space and our display area
- Create(already done) a training room that can hold 30-50 people for in-house events to bring in regional speakers to discuss solutions
- Expand our inventory to be able to supply most any size project and have it there when our customers need it

4.5 acres of property to do all kinds of things:

- Enter the hardscapes business-retaining walls, pavers, outdoor living fireplaces, kitchens, fire pits
- Stock much larger quantities of stormwater pipe, fittings, etc.
- Demonstrate some of our more unique solutions so people can see how they work, why they are effective, etc.

We are excited to be offering a wider range of materials and the ability to expand into hardscapes and outdoor living as well as have additional supply of the products you have purchased from us over the last many years. Come see us, we love to show off the new place. Also make sure to look for information regarding our Grand Opening celebration and our on-going in-house seminars. We hope you can attend.

We Have Survived!

As the article explains on the next page explains, we have had a few challenges in our St. Louis (Fenton) Office. On December 31, 2015 the Meramec River crested at 44.11'-4.4 feet higher than the previous record flooding of 1982. Our yard had as much as 9' of water in it and our building had approximately 11" in it. Anyone who has had to deal with flood water in a building knows that returning to normalcy is a faint dream. Heavy rains make you twitch with concern. Never the less, we are back in our offices, with most everything running(another 30 days with a bad phone system) and we are excited to be back. We are fully stocked and ready to supply all projects in the region. I can't thank our customers enough for putting up with our facility issues and still coming back for more. We also survived a move to a new location in KC. The article above explains that in detail. Thank you to all of our customers for putting up with our transitions!!! They will allow us to be stronger!!
