# BIOSOL FORTE

Biosol Forte is a multi-nutrient fertilizer produced from fermented plant material, vitamins, proteins and enzymes. Through the fermentation process, these materials become organically bound, creating a stable nutrient source to promote long-term soil health and plant growth.

## Science of Biosol Forte

### Long-Lasting Formula

Biosol Forte's slow-release formula releases **50%** of its nitrogen over the course of **130 days**.

### Application Rate

For primary fertilization, Biosol Forte's application rate is **800-1800** pounds per acre.

### Reliable Revegetation

Contractors using Biosol Forte reported losing **less than 1%** of their transplants.

### Quality Nutrients

Biosol Forte contains a guaranteed **7-2-1** ratio of Nitrogen, Phosphate and Potash.

# DIFFERENCE BETWEEN BIOSOL FORTE & ORDINARY ORGANICS

## BIOSOL FORTE

## ORDINARY ORGANICS

**YES**

Biosol Forte will match the growth cycle of the plant and will last **25 weeks** or longer

**LONG  
LASTING  
FORMULA**

**NO**

After 6-8 weeks, other organics will need reapplication

**YES**

The EPA approved Biosol Forte for use in water-sensitive areas where fish and other wildlife are present

**ECO  
FRIENDLY**

**NO**

Other organics cannot be applied near water or storm drains, or if heavy rain is expected

**NO**

Biosol Forte is derived from **100%** plant product

**CONTAINS  
ANIMAL  
WASTE**

**YES**

Most organics contain animal waste or chemicals, such as poultry waste or feather meal

**NO**

Water activates Biosol Forte's activity and will not leach Nitrogen

**NITROGEN  
LEACHING**

**YES**

Once most organics get wet, they leach before plants can use the Nitrogen
