

Next Generation Bioretention

FocalPoint High Performance Modular Biofiltration System (HPMBS) for filtration of stormwater, utilizes physical, chemical and biological mechanisms of soil, plant and microbe complex to remove pollutants typically found in urban stormwater runoff.

FocalPoint HPMBs is a scalable biofiltration system which combines the efficiency of high flow rate engineered soils with the durability and modularity of a highly pervious open cell underdrain/storage/infiltration system. The modular system is a complete, integrated system with a demanding specification to insure quality assurance.

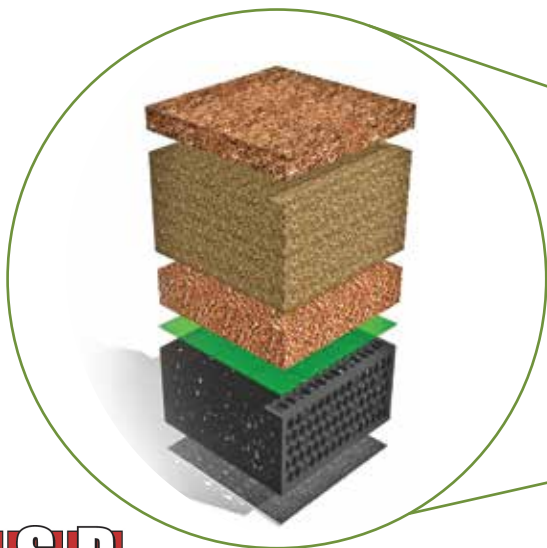

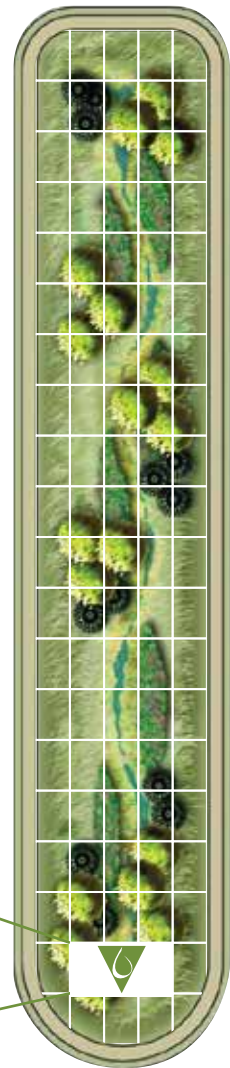

The FocalPoint HPMBs delivers high flow rate efficiency through tightly specified engineered media providing a 100"+ per hour infiltration rate. Treat the same amount of water in <5% of the area required for traditional bioretention (20X reduction in size based on 5"/hour media). With post-installation in-situ verification testing, the FocalPoint HPMBs is performance guaranteed.

Traditional stormwater engineering with its vast array of pipe, inlets and ponds is yesterday's solution. Today, smart owners and design professionals are choosing the next generation of Low Impact Development solutions, reducing hard infrastructure, lowering costs and saving valuable land. They're choosing the FocalPoint HPMBs

FLEXIBLE. RELIABLE. ECONOMICAL

- Gain usable square footage
- Improve system performance
- Reduce material requirements & cost
- Improve property aesthetics & value

Reliable, high performance biofiltration enables reduced footprints, factors of safety, new application options and lower installation and maintenance costs. FocalPoint HPMBs Reduces the burdens of meeting stormwater regulations today, and tomorrow.
